

This was Lockheed
Demo A/c THAT CAME
TO HAWAII.

Lockheed Photo

Lockheed's copter flies upside down.

On Camera

That rigid-rotor Lockheed 286 helicopter, which recently showed its stuff in Island skies, has just demonstrated its aerobatic capabilities for cameras in California.

For the photographic record, the 286 performed loops, barrel rolls, vertical climbs and the dives of a fixed-wing fighter in a single flight.

Lockheed photographer Erik Miller, in a sister copter, even recorded the 286 flying upside down over the mountains near Oxnard.

P.S. My wife + I
got to fly in
it over PEARL
HARBOR. GREAT
FLIGHT IT WAS
A CIVILIAN A/C
AT THE TIME
